3 In-Order vs. Out-of-Order Superscalar Processors

3.a Performance of In-Order Dual-Issue Processor

Cycle:	0	1	2	3	4	5	6	7	8	9	10	11	12	13
lw r1 , 0(r2)	F	D	I	L0	L1	W	C							
mul r3, r1, r4	F	D	I	I	I	Y0	Y1	Y2	Y3	W	C			
sw r3, 0(r5)		F	D	D	D	D	D	D	I	S	W	C		
addiu r2, r2, 4		F	D	D	D	D	D	D	I	A	W	C		
addiu r5, r5, 4			F	F	F	F	F	F	D	I	A	W	C	
addiu r6, r6, -1			F	F	F	F	F	F	D	I	B	W	C	
bne r6, r0, loop									F	D	I	A	W	C
opA									F	*	*	*	*	*

Figure 8: Pipeline Diagram for In-Order Dual-Issue Processor

As shown by the bold vertical lines, during steady state, each loop takes 9 cycles to execute. The W stage of the lw instruction is included because during looping, the W stages causes an extra cycle of "delay" between the last commit of the previous iteration and the first commit of the current iteration.

Therefore, the total number of cycles it takes to execute 64 iterations is $9 \times 64 = 576$ cycles.

3.b Performance of Out-of-Order Dual-Issue Processor

Cycle:	0	1	2	3	4	5	6	7	8	9	10	11	12	13
lw r1 , 0(r2)	F	D	I	L0	L1	W	C							
mul r3, r1, r4	F	D	I	I	I	Y0	Y1	Y2	Y3	W	C			
sw r3, 0(r5)		F	D	D	D	D	D	D	I	S	W	C		
addiu r2, r2, 4		F	D	D	D	D	D	D	I	A	W	C		
addiu r5, r5, 4			F	F	F	F	F	F	D	I	A	W	C	
addiu r6, r6, -1			F	F	F	F	F	F	D	I	B	W	C	
bne r6, r0, loop									F	D	I	A	W	C
opA									F	*	*	*	*	*

Figure 9: Pipeline Diagram for Out-of-Order Dual-Issue Processor

As shown by the bold vertical lines, during steady state, each loop takes 9 cycles to execute. The W stage of the lw instruction is included because during looping, the W stages causes an extra cycle of "delay" between the last commit of the previous iteration and the first commit of the current iteration.

Therefore, the total number of cycles it takes to execute 64 iterations is $9 \times 64 = 576$ cycles.
